

**I. Introduction**

PR-24D-12D is designed for long distance power transmission over DC cable. By using higher voltage power source , PR-24D-12D will convert it back to 12VDC at camera side to realize long distance power transmission especially when more power consumption is required such as large IR cameras.

**II. Features**

1. Input: 8~24V DC
2. Output: 12V DC, 1.0 Amp
3. transmission distance up to 150M (using PR-24V1A power supply)
4. Easy installation connector terminals
5. Working temperature:-30 to 80°C
6. Dimensions:75\*30\*23mm

**III. Connection Diagram**
